

# Recycling/Waste Management

- ▶ Consider space requirements for temporary storage and discuss with site manager before installation.
- ▶ Ensure your installation price includes waste management.
- ▶ It is the contractors responsibility to remove metal and waste from lighting upgrade site.
  - ▶ For evidence purposes, we require a **certificate of destruction** from metal recycler or tip indicating weight and description (e.g. light fittings & ballasts). Metal recyclers will not charge for disposal but most tips will.
- ▶ All removed lamps/tubes must be sorted and packaged correctly so they are ready for collection by an authorised lamp recycler. Boxes must be labelled with lamp type and quantity. Tubes should not be taped but rather kept loose in boxes.
- ▶ For large jobs take photo of all stacked lamp recycling cartons as this is often requested by lamp recycler.
- ▶ Lamp counts must match what was removed/claimed in quotation and for ESC creation.
